

Kiefer “Surge” Starting Platform

Prod. #: 500345

- **Integrated Colorado Timing Systems (CTS) equipment.**
- **RJP easily removed for storage.**
- **Cables and connections housed internally for tangle free routing and a clean deck.**
- **Easily assembled and installed.**
- **Meets all FINA, USS, NCAA and NFHS specifications.**
- **Powder coated 10 gauge T-304L Stainless Steel base & step support.**
- **Non-skid surface ensures the proper grip for fast & secure starts.**

Relay Judging Platform (RJP)

The relay judging platform is a pressure-sensitive electronic device that accurately registers when a swimmer leaves the starting block. This time is electronically compared with the start signal to determine start reaction time, false start calls, or with the incoming swimmer's touch on the touchpad in a relay.

Speedlights

LEDs across the front of the RJP flash simultaneously with the starting system horn and strobe light. Lights give an additional signal to athletes and create a fairer start for hearing impaired individuals. Athletes can easily see the lights without altering their ace ready posture.

Deck Plate Connector

A military connector with gold-plated connections is mounted in the pool deck. One short cable runs from this deck plate to the on-board connection hub. This system provides greater convenience and less possibility of corrosion from pool chemicals and water. The connector is covered when not in use to prevent corrosive build-up.

On-board Connection Hub and Horn

A connection hub under the block replaces the traditional deck plate as the place where all the electrical components plug in:

- Relay judging platform, (RJP).
- Touchpad.
- Speedlights.
- Individual lane starting horn.
- 3 backup buttons for judges.
